

ÁLIX

Fescue variety created by El Solc

Features

- ✓ Erect perennial fescue with high forage production.
- ✓ Precocious variety.
- ✓ Very well adapted to the cool areas in the north of the Peninsula, as well as to the irrigated parts of the Ebre River Valley.
- ✓ Fast and vigorous regrowth after harvest.
- ✓ The fescue, thanks to its extensive root system, helps improve the soil in both structure and fertility.
- ✓ Excellent plant health.

**PRODUCTION
HARDINESS
VERSATILITY**

Main strengths

- ✓ Formidable persistence.
- ✓ High forage production.
- ✓ High regrowth capacity.
- ✓ Extremely adaptable and hardy.
- ✓ Production of a fine forage that cattle love.
- ✓ Very high resistance to cold.

Recommendations

- ✓ Crop extractions in kg of nutrients for every 1,000 kg of dry material:

| N | P ₂ O ₅ | K ₂ O |
|----|-------------------------------|------------------|
| 17 | 4 - 8 | 18 - 22 |

| Sowing specifications | |
|-----------------------|----------------------|
| Seed rate | 30 - 35 kg/ha |
| Fall sowing | September - November |
| Spring sowing | February - April |
| Depth | 0.5 - 1 cm |

- ✓ Nitrogen fertilizer should be applied throughout the cuts, recommending an application of 100 - 120 kg per N/Ha and cut. However, phosphate and nitrogen should be applied using deep placement at the exit of the cut according to performance potential.
